

Rotate shared secrets without a spreadsheet of doom

For solo operators running the whole business.

Who this is for

Solo operators and one-person businesses who wear every hat â sales, delivery, admin, and support â and need leverage without hiring a department.

Solo ops still share passwords in chat â until something leaks.

Suggested stack

Password manager business plan + documented owners. Primary tools: 1Password, Bitwarden, Vault.

Do this

1. Move every business login into 1Password/Bitwarden.
2. Use shared vaults per client or per function â not one mega vault spam.
3. Enable 2FA everywhere; store OTP in the manager.
4. Quarterly: rotate hosting, DNS, and payment passwords.

Operator tip

Your future contractor should inherit vaults, not DMs.
